Numb. 2324

Friday, December 3. 1742.

I Have been induced to reprint this Letter from many Reasons, but particularly from this, that it is the fulleſt and faireſt Proof of the Juſtice of thoſe Obſervations, which were formerly publiſhed in this Paper upon Inſtructions. As to the Piece itſelf, it is not only written with great Judgment and the utmoſt Reſpect to Decency, but is alſo penned with ſuch Accuracy of Stile, and in ſo juſt a Turn of Expreſſion, as render it a very valuable Inſtance of *Engliſh* Eloquence.

The BRISTOL INSTRUCTIONS.

From the Gentleman's Magazine, *Page 595.*

To the Right Hon. EDWARD SOUTHWELL, *Eſq; ſurviving Repreſentative in Parliament for the City of* Briſtol.

IN the preſent difficult Conjuncture, when the Honour of the Crown, the Intereſt of the Kingdom, and the Tranquillity of *Europe*, demand the Attention of the Legiſlature, We, the Mayor, Recorder, Aldermen, Sheriffs, and Common-council-men of the City of *Briſtol*, in Common-council aſſembled, take the Liberty of addreſſing ourſelves to you, who have the Honour to repreſent this City in Parliament; and we flatter ourſelves you will not be diſpleaſed that we uſe a Freedom on this Occaſion, not unbecoming Perſons ſenſible of the Importance of the preſent Criſis, and concerned for the Welfare of their Country.

It hath been for more than an Age paſt, the ruling Ambition of a neighbouring State, to render all the other Potentates of *Europe* the meer Creatures of her Power, and Miniſters of her Will: Upon this Syſtem all her Politicks have turned; to this Point have all her Councils been directed; with this View ſhe hath been lately kindling the Flame of a general War in *Europe*: And to facilitate this Scheme of Univerſal Monarchy, ſhe has actually invaded a natural and antient Ally of this Kingdom, in open Violation of the moſt ſolemn Engagements. And tho' with the utmoſt Duty and Gratitude we acknowledge the Wiſdom, Equity, and Magnanimity of his Majeſty's Councils, and rejoice in the great and glorious Effects of them; yet we cannot reflect on the Dangers which but lately engaged the Attention, and awakened the Fears of good Men of every Party in the Kingdom, without a very ſenſible Concern for the future Event of Things; for it will ſtill depend on the Conduct of *Great Britain*, and on the Part his Majeſty may further be enabled to take in the preſent uncertain State of of Things, Whether the Balance of *Europe* ſhall be yet maintain'd? Or, in other Words, Whether *Great Britain* ſhall for the future be a free or a dependent Nation?

Your known Attachment to the Intereſt of your Country, unbiaſſed by perſonal Views, nor moved by Popular Clamour, leaves us no room to doubt, that at this critical Juncture you will ſteadily and uniformly perſue ſuch Meaſures as conduce to the Stability of his Majeſty's Government, the Protection and Advancement of our Trade, and to the Safery, Honour, and laſting Intereſt of the Kingdom, particularly, that you will cheerfully concur in granting to his Majeſty early and effectual Supplies for the Service of the enſuing Year. This is a Service the preſent State of Publick Affairs, and the high Truſt you bear, require from you: And did we not preſume, that your own Senſe of the Importance of the Service renders all other Motives unneceſſary, we could in the moſt earneſt Manner recommend it to you.——For, without the neceſſary Supplies, *Great Britain* muſt be wholly unactive at a Seaſon, when the utmoſt Prudence, Vigour and Reſolution is neceſſary, to avert the Dangers that threaten her and her Allies: The War with *Spain*, a War undertaken by his Majeſty in Defence of our moſt valuable Rights, and with the concurrent Voice of the whole Kingdom, muſt end to the eternal Reproach of this Nation, without Satisfaction for paſt Injuries, or Security againſt future Inſults; and the Liberties of *Europe* will, we fear, become an eaſy Prey to the Ambition of a formidable Power, ever jealous of the Proſperity of *Great Britain*, and equally a Foe to our Civil and Religious Rights. In this View of Things, we cannot fear that the neceſſary Supplies will be denied; or even, that they will be poſtpon'd to Conſiderations of a more domeſtick Concern.

We are not ignorant that this Meaſure hath been recommended by ſome of our Fellow-ſubjects with an uncommon, (we wiſh we could not ſay) an indecent and unreaſonable Zeal. For our own Parts we declare, that as we eſteem the Freedom and Conſtitutional Independency of the Commons in Parliament among the moſt valuable of our legal Rights, if not the Foundation of all the reſt; ſo we are convinced, that every conſiſtent Advocate for *Britiſh* Liberty muſt pay a juſt Regard likewiſe to the Freedom and Conſtitutional Independency of the other Branches of the Legiſlature. And ſince a peremptory Demand of new Laws, as preliminary to the granting the neceſſary Supplies in a Time of actual War, hath in our Opinion a fatal Tendency, either to deſtroy that Freedom and Independency, or to leave the Nation defenceleſs, we aſſure ourſelves you will not give into a Meaſure ſo repugnant to our Conſtitution, and in its Conſequences ſo deſtructive to your Country.

We cannot, we ought not, to conclude this Addreſs without making our publick Acknowledgments to you for your unwearied Attendance to the Duties of your Truſt, and the conſtant Attention you have given to every Point in which the Trade of the Kingdom or the Intereſt of this City have been concerned.

CANN, *Town-Clerk.*

THE Elements of ALGEBRA, in a

New and Eaſy Method; with their Uſe and Application, in the Solution of a great Variety of Arithmetical and Geometrical Queſtions, by General and Univerſal Rules.

To which is prefix'd, An Introduction containing a ſuccinct Hiſtory of this Science.

By Mr. NATHANIEL HAMMOND, *of the* Bank.

Extract from the Account of this Book in the Works of the Learned.

'The World has long complained of the Want of a proper Introduction to Algebra. Some are ſo very conciſe, as if they were contrived not to teach but introduce a Teacher; others again are larger, but wrote with ſo little Condeſcention to the Underſtandings of ſuch as are altogether unacquainted with the Science, that they are of very little Uſe to thoſe who are moſt inclined to make uſe of them. Whence it comes to paſs, that few find it practicable to make any Progreſs in Algebra without a Maſter, tho' certainly the Science in itſelf is far from ſurpaſſing a clear Head, and a tolerable Underſtanding.

'The Deſign of this Treatiſe, which is of a reaſonable Bulk, and which contains nothing which is not ſolid, and to the Purpoſe, is to aſſiſt ſuch as are engaged in teaching Algebra with a regular Method, and a large Stock of Examples; ſo that their Scholars may find Employment in their Abſence; and to enable ſuch as live in Country-Places, and muſt conſequently want all other Tutors, except Books, to acquire ſuch a Skill in this Science, as may enable them to ſpend a Portion of their Time agreeably in the Cultivation of their better Parts, and in rendering a natural Method of enquiring after Truth habitual.

'The Treatiſe begins with a copious Explication of the Fundamental Principles of the Art, and of the Signs and Method of Notation uſed therein. The Author then proceeds to the ſeveral Rules, explaining them carefully and copiouſly in all their various Caſes; ſo that with a moderate Attention it is ſimply impoſſible for a Perſon, who deſires to be Maſter of Algebra, to miſs of his End.

'We never find this Writer advancing any thing out of its proper Place, or burthening the Mind of his Scholar with Rules, before they become neceſſary: He profeſſes to have imitated the judicious *Euclid* in this Reſpect; and he has done it with equal Art and Felicity. By this means he has delivered the young Student in Algebra from that which is uſually the moſt fatiguing Part of the Science, viz. The Doctrine of Surds, in the Manner in which it is uſually taught. By the ſame Means he leads his Reader directly to Equations; and, by ſhewing him the Profit he will reap from this Science, encourages him to overcome all its Difficulties. But having thus laid a ſtrong and rational Foundation, he moves more ſlowly through the reſt of his Work, that whoever follows him, may be obliged to become Maſter of ever Branch of the Art, ſo as to be a compleat Algebraiſt, before he quits his Book, and not a Smatterer.

'Quadratic Equations, and the Art of managing Converging Series, the admirable Invention of the incomparable *Newton*, are here ſo clearly explained, and their ſeveral Caſes ſo plainly ſet down, and ſo thoroughly explicated, that it may be truly ſaid, there are no where elſe ſuch Inſtructions to be met with. At the Cloſe of the Book, we find abundance of Obſervations, neceſſary for enlightening ſuch Minds as are willing to proceed ſtill farther in analytic Diſcoveries; ſo that conſidering the Compaſs of this Work, and that too is very moderate, it is as complete as poſſibly can be expected: And he who is thoroughly verſed in it, will find no great Difficulties, when he proceeds to ſublimer Studies. The Language is plain and natural, the Book is more copious than any other in Examples, and the Illuſtrations of them are ſo full and clear, that it is impoſſible to miſtake their Meaning.'
